

## WRI - Electronic declaration file

**You can declare your rights on works and update them by using an electronic format called WRI (Works and Rights Import).**

- The rights on works you wish to declare and/or to update at AGICOA **are stored at your end in a database** (Oracle, MS-Access, etc ...). The WRI format will allow to import this data from your database into AGICOA's database;
- The WRI format is suited especially for **mass declarations**;
- Each time you send us your declarations in the WRI format, the Portfolio Manager validates them. Then you will be able to use IRRIS Web (Web declaration portal) to query your data.

For any questions, kindly contact your Portfolio Manager or [info@agicoa.org](mailto:info@agicoa.org).
